

PRAISE OSSY NWOYE

📍 Abuja, Nigeria ✉ Nwoyepraise@gmail.com 📞 +234 814 080 4276 🌐 [PraiseOssyNwoye](#) 🌐 [Portfolio](#)

PROFESSIONAL SUMMARY

Data analyst with a strong foundation in civil engineering and a proven track record in financial analysis, predictive modeling, and cross-functional stakeholder reporting. Expertise in data cleaning, ETL pipeline development, and business intelligence dashboarding, with a strong understanding of statistical modeling, machine learning workflows, and feature engineering in Python and SQL. Skilled in translating complex technical findings into actionable insights and ensuring data quality standards across large-scale projects.

TECHNICAL SKILLS

Analytics & BI	Python (Pandas, NumPy, Streamlit), Power Query, Power BI, Tableau, Excel (advanced)
Machine Learning	scikit-learn, statistical modelling, predictive analytics, feature engineering
Databases & SQL	MySQL - data cleaning, standardization, exploratory queries, ETL pipelines
Domains	Energy & infrastructure (Nigeria), LCOE analysis
Others	Prompt engineering, cross-functional stakeholder reporting

EXPERIENCE

Zebcha Infrastructure

Analyst

Mar 2025 – Present ·
Abuja

- **Calculated LCOE for a \$2.4B solar project** in Excel. The output is fed directly into the company's investment decision documents.
- **Pulled together Nigeria's electricity sector data** for the M300 project supply figures, demand trends, and infrastructure gaps.
- **Cleaned datasets from multiple sources** in Excel. Caught field inconsistencies early enough that they did not show up in the final stakeholder reports.
- Stayed in sync with the financial advisory and transaction teams throughout, making sure what I was producing matched what each team actually needed.

Spitze Construction Limited

Intern

Mar 2023 – Sep 2023 ·
Abuja

- Supervised excavation and setting out on residential builds. Got used to working from technical plans under pressure and catching positioning errors before they became expensive.
- Explained building plans to site workers, daily good practice for translating technical detail into plain language, which is half the job in data work too.

Julius Berger Nigeria PLC

Intern

Aug 2022 – Sep 2022 ·
Abuja

- Worked under site engineers on large infrastructure projects. Learned what it looks like when quality standards get enforced consistently and what happens when they do not.

DATA PROJECTS

Loan Predictor *Python · scikit-learn · XGBoost · Streamlit · Power BI*

- **Trained three models (Linear Regression, Random Forest, XGBoost)**, tuned the best one, and deployed it as a working Streamlit app, not just a notebook.
- Engineered features, including BMI, encoded categorical, removed outliers, and transformed the target variable. Built a Power BI dashboard alongside it so the results were readable without touching the code.

Calories Burned Predictor *Python · XGBoost · scikit-learn*

- Merged two datasets on User_ID, ran EDA, engineered BMI, trained and tuned an XGBoost pipeline. **Saved the final model as a .pkl file** so it can run predictions on new data without retraining.

Global Tech Layoffs 2020–2025 *MySQL*

- Cleaned 2,500+ records: deduped, standardized company names, unified industry labels, filled gaps via self-join, converted date types.
- **Analysis included rolling monthly totals, per-company maximums (Intel: 22,000), 100% shutdown rankings by funds raised, and top-5 per year** using DENSE_RANK.

Sales & Customer Insights 2020–2023 *MySQL*

- Cleaned 10,000 records, zero duplicates or nulls after staging. **Found top AOV at \$199.96, max lifetime value at \$9,999.76 in Electronics, and mapped the full churn range (0.0–1.0).**

British Airways Review Dashboard *Tableau*

- **Dashboard tracks passenger ratings by month, country, aircraft type, and seat class.** The Boeing 747-400 rated noticeably higher than the A321. Entertainment was the lowest-scoring metric across almost every segment.

Department Store Analytics *Excel*

- Analyzed a retail dataset across clothing, shoes, and accessories spend by location, color preferences, category breakdown, and average customer age. Wrote up what the numbers actually suggested for inventory and marketing.
